## Carbide Tipped Circular Saw Blades with thin cutting-width for steel treatment

**ARNTZ-ECO-SAW** Saw Blades are especially distinguished by their thin cutting width. They are, in contrary to „One-Way-Blades“, several times re-grindable and, by this, also more efficient. Even stainless-steel qualities can be cut with good results. These Saw Blades are un-coated, or alternatively also with **TiAIN coating** deliverable. The advised cutting speeds are in the range of  $V_c = 70 - 140$  m/min.
